THE LABOUR FORCE

Scope, Definitions and Explanatory Notes

The Population Survey

1. The statistics contained in this publication have been compiled from the Australian Bureau of Statistics' Population Survey. The population survey is the general title given to the household sample surveys carried out monthly in all States and Territories. (Before February 1978 surveys were conducted in February, May, August and November each year). Emphasis in the survey is placed on the collection of data on demographic and labour force characteristics, the principal survey component being referred to as the Labour Force Survey. The remaining part of the population survey consists of supplementary collections which are carried out either in conjunction with the labour force survey or, where the topics require personal interview or are too complex to be treated within the processing timetable of the monthly survey, by means of special surveys, generally conducted once a year.

2. The survey is based on a multi-stage area sample of private dwellings (about 30 000 houses, flats, etc.) and covers about two thirds of one per cent of the population of Australia. Because of the small population the sample fraction in Tasmania is approximately 1.67 per cent or 1 in 60 of the population (approx. 2,500 dwelling units). Information is obtained each month from the occupants of selected dwellings by carefully chosen and specially trained interviewers. Interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. Information obtained relates to the week before interview. Operational problems related to the Christmas/New Year holiday period may cause some adjustment to timing of the December and/or January surveys.

3. The labour force survey includes all persons aged 15 and over except:

- (i) members of the permanent defence forces;
- (ii) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (iii) overseas residents holidaying in Australia;
- and
- (iv) members of non-Australian defence forces (and their dependants) stationed in Australia.

Definitions

4. The labour force category to which a person is assigned depends on his actual activity during the survey week. The definitions used conform closely to the international standard definitions specified by the International Labour Organisation.

- (i) Employed persons comprise all those aged 15 years and over who, during the survey week:
 - (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (including employees, employers and self-employed persons); or
 - (b) worked for 15 hours or more without pay in a family business or on a farm (e.g. unpaid family helper); or

- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the survey week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the survey week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- (d) were employers of self-employed persons who had a job, business or farm, but were not at work.

(ii) Unemployed persons are those aged 15 years and over who were not employed during the survey week, and

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:

- (i) were available for work in the survey week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the survey week); or

- (ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then;

or

- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

(iii) Unemployment rate for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.

(iv) Labour force comprises all persons who, during the survey week, were employed or unemployed, as defined above.

(v) Labour force participation rate for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.

(vi) Persons not in labour force are those persons who, during the survey week, were not in the categories 'employed' or 'unemployed'. They include persons keeping house (unpaid), attending an educational institution, retired, voluntarily inactive, inmates of institutions, etc.

Scope, Definitions and Explanatory Notes - cont.

5. Full-time workers are those who usually worked 35 hours or more a week and others who, although usually part-time workers, worked 35 hours or more during the survey week. Part-time workers are those who usually worked less than 35 hours a week and who did so during the survey week. When recording hours of work, fractions of an hour are disregarded.

to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

Revision of series:

7. The data in this bulletin is not comparable with previous publications because the estimates have been recalculated back to February 1978 to conform to revised population estimates which take account of results of the 1981 Census.

8. Regional Labour Force Statistics are available from October 1982. The Tasmanian Regions are:

- (i) Hobart & Southern (Hobart plus Southern Statistical Divisions).
- (ii) Northern (Northern Statistical Division).
- (iii) Mersey-Lyell (Mersey-Lyell Statistical Division),

and are shown on Page 10.

As well as the data published in Table 2, certain additional details are available on microfiche held in this office.

Other Sources of Statistical Information about the Labour Force

9. The population census asks questions relating to the labour force which use similar definitions and concepts as the Population Survey. The Census has been conducted on a five yearly basis since 1961. The Census provides less frequent detailed counts for small areas while the population survey provides detailed and up to date estimates of employment and unemployment for Australia and States. The Bureau also collects results of the quarterly Survey of Employment and Earnings which was introduced in the September quarter 1983. The survey is designed to obtain from employers information on a number of wage and salary earners employed each month and their quarterly earnings. It replaces the civilian employees series based primarily on information obtained from payroll tax returns which was discontinued after April 1980.

10. Economic Censuses and Surveys (e.g. Mining and Manufacturing) are undertaken by the ABS in order to collect employment data from those units selected. Statistics relating to unemployment benefits are compiled and released by the Department of Social Security.

Reliability of the Estimates

6. Estimates in this publication are subject to two sources of error:

- (a) sampling error; is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. The standard error can also be expressed as a percentage of the estimate, and this is known as the relative standard error. See table of standard error below.
- (b) non-sampling error; inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in the coding and processing of data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error

Related Publications

Later releases of the statistics contained in this annual bulletin are generally available in the ABS Canberra Office publications listed below. Information for other states, or more detailed information is available on request. Some details are also included in the Monthly Summary of Statistics, Tasmania (1303.6). The publication, Employment, Earnings and other Labour Related Statistics, Tasmania (6102.6) gives details of wage and salary earners, earnings, hours, trade unions and industrial disputes.

The Labour Force (6203.0), monthly.
 Labour Force Experience (6206.0), annual.
 Labour Mobility (6209.0), annual.
 Multiple Jobholdings (6216.0), biennial.
 Persons not in the Labour Force (6220.0), biennial.
 Characteristics of Persons Looking for work (6222.0), annual.
 Labour Force Statistics and other Characteristics of Families (6224.0), annual.
 Transition from Education to Work (6227.0), annual.
 Employment, Underemployment and Unemployment (6246.0), irregular.

Information about Tasmanian Office ABS publications may be obtained from the Catalogue of Publications, 1983 Tasmanian Office (1103.6). All publications produced by the ABS are listed in the annual Catalogue of Publications (1101.0) which is available free of charge from any ABS office.

Symbols and Other Usages

The following standard symbols are used in publications of the Tasmanian Office of the Bureau:

ASIC	Australian Standard Industrial Classification	r	figure of series revised since previous issue
M	males; F females; P persons	..	not applicable
n.a.	not available	-	nil or rounded to zero
n.e.c.	not elsewhere classified	—	break in continuity of the series (where drawn across a column between two consecutive figures)
n.e.i.	not elsewhere included		
n.p.	not available for separate publication but included in totals where applicable.	(H)	located in Hobart Statistical Division;
n.y.a.	not yet available	(S)	located in Southern Statistical Division;
p	preliminary - figure or series subject to revision.	*	subject to sampling variability too high for most practical purposes.

Values are shown in Australian currency.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

(a) The unemployment rate for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.

(b) The participation rate for any group is the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

(a) Since the above estimates are based on a sample, they are subject to sampling errors. Refer explanatory notes, page , paragraph .

(b) Includes (i) electricity, gas and water, (ii) communication, (iii) public administration and defence.

Note: Due to changing definitional concepts, reclassification on the ABS integrated register may result in aberrations in the trends shown in the above data. These are minimised where possible to maintain the continuity of the series.

Characteristics of Families and the Labour Force

In July 1983 and August 1984, a survey based on the monthly population survey, was conducted throughout Australia to provide details of the labour force status of family members, their relationship to the family head and family composition. These data are now collected monthly as part of the Labour Force Survey.

Family relationships

The determination of family relationships and composition is complex, involving many factors. The following description outlines the major principles used for this survey. A family is defined as consisting of two or more related persons usually resident in the same household at the time of the survey. A family comprises a married couple or a family head (as defined below) together with any persons having any of the following relationships to them:

- (a) sons or daughters of any age, if not married and with no children of their own present;
- (b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- (c) any children under 15 years of age who do not have a parent present.

The following points should be noted in relation to the definition of a family in the previous paragraph:

- (a) the term relationship includes relationships by blood, marriage or adoption;
- (b) a family, as defined, can contain no more than two married persons, and can contain two married persons only if these persons are husband and wife (referred to as married-couple families);
- (c) other families are families other than married-couple families as defined above. In addition to one-parent families, this category includes families in which there is no parent, for example a family head living with a brother or sister;
- (d) persons are defined as not a member of a family if they are not related to any other member of the household in which they are living. A person is considered to be living alone if he or she is the sole member of a household. Thus, a person who is the sole occupant of a self-contained flat attached to another dwelling is considered to be living alone;
- (e) the terms usually reside and present are synonymous, and refer to persons who were identified by the respondent as usual residents of the household at the time of the survey.

The family head of an other family is the parent in the case of a one-parent family or, in the case of other groups of related persons, is generally defined to be the eldest person in the family. No family head is defined for a married-couple family.

Dependent children comprise all family members under 15 years of age and all family members aged 15 to 20 years who are full-time students.

TABLE 8. FAMILY STATUS AND LABOUR FORCE STATUS OF PERSONS AGED 15 AND OVER, TASMANIA, AUGUST 1984

	Employed		Unempl- oyed	Labour force	Not in the labour force	Total	Unemploy- ment rate	Partici- pation rate

(a) Aged 15 and over.

UNDEREMPLOYMENT

The approach adopted by the ABS in its monthly publications is to define two categories of underemployed persons:

- (i) Part-time workers who indicate that they would prefer to work more hours. Statistics on whether these persons are available to work additional hours are not collected by the ABS, but statistics classified by whether or not they are actively looking for full-time work are collected.
- (ii) Full-time workers not working full-time hours (ie. 35 hours or more) in the reference week due to economic reasons (eg. stood down or on short-time due to insufficient work).

Persons working part-time and did not prefer to work more hours or full-time workers who did not work full time hours during the reference week for non-economic reasons are defined as fully-employed. Also persons who normally would be underemployed but worked full-time hours during reference week are classified as fully employed.

Statistics on the underemployed and fully employed as defined above are produced monthly and are analysed in statistical presentations in terms of the usual demographic and labour force characteristics. Of particular importance is the determination of underemployment rates, i.e. underemployed persons as a percentage of the labour force, which are of interest especially for comparison with unemployment rates. Together, unemployment and underemployment comprise what the labour utilisation model calls labour underutilisation, and the labour underutilisation rate measures the percentage of the labour force whose labour is underutilised.

(a) The estimates prior to February 1983 are not strictly comparable with those for 1983 and 1984. The reference period for the February 1981 and 1982 surveys was from the beginning of the previous February to the end of the week prior to interview. As interviews were conducted over the second and third week of February, the reference period could extend to 54 weeks. For the 1983 and 1984 surveys the reference period is the 52 weeks up to the end of the week prior to interview.

Multiple job-holding

In association with the August 1983 labour force survey conducted throughout Australia, employed persons were asked about the nature and extent of multiple job-holding.

- Persons were classified as multiple job-holders if, during the survey week, they
 - worked in a second job or held a second job from which they were absent because of holidays, sickness or any other reason; and
 - were an employee (i.e. employed as a wage or salary earner) in at least one of their jobs.

Work as an unpaid family helper or service in the reserve defence forces was not regarded as a second job. Persons who by the nature of their employment worked for more than one employer, e.g. domestics, odd-job men, babysitters, etc., were not counted as multiple job-holders unless they also held another job of a different kind; nor were those who worked for more than one employer solely by reason of changing jobs during the survey week.

- The main job was defined as the job at which most hours were usually worked or, where an equal number of hours were usually worked at two or more jobs, the job considered by the respondent to be the main job.
- Definitions of the principal labour force categories appearing in this publication are given in The Labour Force, Australia (6203.0).
- The term not married comprised never married, widowed and divorced.
- Proportion of labour force referred to the number of multiple job-holders in each group as a percentage of the civilian labour force in the sample group.

Duration of current period of unemployment

This is the period from the time the person began looking for work or was laid off to the end of the survey week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the survey week. Periods of unemployment are recorded in complete weeks and this results in a slight understatement of duration. Average (mean) duration is the duration obtained by dividing the aggregate number of weeks a group has been unemployed by the number of persons in that group. Median duration is the duration which divides persons looking for work into two equal groups, one comprising persons whose duration of unemployment lies above the median and the other, persons whose duration is below it.

School Leavers

In association with the May 1982 and 1983 labour force surveys conducted throughout Australia persons aged fifteen to sixty four who had attended an educational institution in 1981 and 1982 or were attending one at the time of the survey were asked about their labour force participation. Separate information was obtained in respect of persons who were full time students in 1981 and 1982 and who had continued their full time education in the following year and those who had not returned to full time education in the following year.

The latter are referred to in Table 13 as leavers. Further information may be obtained from publication number 6227.0, 'Transition from Education to Work, Australia'.

EMPLOYMENT BENEFITS

Definitions

An employment benefit is defined as a concession, allowance or other privilege, etc. received in addition to wages or salary and award, etc. minimum provisions under which a person was employed. Not all benefits were received direct from the current employer; some may have been received from other sources by employees as a result of their employment in a particular occupation or industry. Such benefits, e.g. a concession air fare granted by an airline to a travel agency employee, are included in the tables where appropriate. All types of wage and salary payments, including bonuses, payments for leave of various kinds and overaward payments, as well as emoluments received in accordance with award, etc. provisions, e.g. safety clothing, were not considered to be benefits for the purposes of the survey. Definitions of benefits about which information was sought are given in the following paragraphs.

Questions concerning employment benefits were asked only in respect of persons who at the time of the survey were employed wage or salary earners (employees) and who usually worked at least 20 hours a week. Demographic and labour force characteristics shown were as reported by employees at the time of the survey.

Questions were asked during a special Supplementary Household Survey during the period February to May 1979 as a supplement to the monthly Labour Force Survey in August 1983.

Holiday costs: Any free or discounted holiday or holiday travel expenses paid for or subsidised as a result of a person's employment at the time of the survey.

Low interest finance: Finance provided by a lender at a lower rate of interest than the lender's usual rate for the particular purpose for which the loan was made. In some cases finance provided by institutions whose borrowers were restricted to employees of certain organisations, e.g. some credit unions, was included as a benefit. (However, where such institutions made finance available to non-employee members, these persons were not considered to be in receipt of a benefit.)

Goods and services: Goods and services (not included under other headings) provided free or at a discounted price to an employee, e.g. a motor vehicle supplied at a discount price to an employee of a car manufacturer.

Housing: Assistance in the provision of or subsidisation of the costs of accommodation used as a residence by a person or his family. It includes the provision to an employee, as an employee entitlement, of a residence owned by the employer, payment or subsidisation of rent or board, provision of a housing allowance and payment or subsidisation of water, sewerage or general rates payable to local government authorities.

Electricity, etc: Payment or subsidisation by a person's employer of household fuel and/or power expenses, including electricity, gas, oil and firewood.

Telephone: Payment or subsidisation, by the employer, of private telephone charges.

Transport: Assistance with day-to-day travelling for private purposes by the provision of a vehicle or by other means, e.g. travelling allowance, excluding payment or subsidisation of the cost of travel to and from work. This type of emolument when used for less frequent purposes, e.g. holidays, was classified as another type of benefit, e.g. holiday costs.

Medical: Payment or subsidisation by the employer, of an employee's medical and/or hospital expenses, etc. and/or benefits fund contributions. Deduction from the employee's wages or salary, where the employee paid the full contribution, was not considered to be a benefit.

Union dues: Payment or subsidisation by the employer of the employee's union membership dues or professional association membership fees. Deduction from the employee's wages or salary, where the employee paid the full amount, was not considered to be a benefit.

Persons Not In The Labour Force

As levels of unemployment have risen during the past decade, the term 'hidden' unemployed has been widely used a description of those persons who, although they fail to satisfy the searching and availability for work criteria for classification as unemployed and are therefore classified as not in the labour force, nevertheless have some commitment to gain work. Such persons may have withdrawn from the labour force because they perceived their job prospects as poor in the light of the prevailing labour market conditions.

Defining hidden unemployed so objective measurement may be undertaken presents a number of difficulties. Fluctuations in participation rates inconsistent with marked trends imply labour market induced movements of persons into or out of the labour market. Similarly the flows of persons from 'unemployed' to 'not in the labour force' from one month to the next would include persons who withdrew from the labour force in response to their experience in searching for work. The difficulties in drawing conclusions about the number and characteristics of the hidden unemployed is apparent.

To appraise the level of hidden unemployment it is necessary to consider a number of measures including the individual's intention to look for work together with his ability to accept work if offered. No single measure or combination of measures is completely satisfactory.

Measures of hidden unemployment are produced by the ABS from a survey of persons not in the labour force, conducted in March and September each year. The approach used has been based on the concepts of marginal attachment to the labour force as well as the discouraged job seeker. Marginal attachment to the labour force relates to those individuals who are considered to have a close association with the labour force. Discouraged job seekers represent that group of the marginally attached who are out of the labour force because of their perceptions of labour market conditions.

The definition of marginal attachment is not dissimilar to that for unemployment. Both use the criteria of actively looking for work and availability to start work. A person is defined as marginally attached to the labour force if he or she is not in the labour force during the reference week and satisfies one of two conditions; that is, the person must either:

- (a) want to work and be available to start within four weeks; or
- (b) be actively looking for work, but not available to start within four weeks.

Four weeks is used to determine the availability for the marginally attached, compared with one week for the unemployed.

TABLE 17. PERSONS NOT IN THE LABOUR FORCE BY AGE, MARCH 1984 (a)
('000)

Age	Males			Females			Persons
